

## **Expense Tracker App**

**USING JAVA FX** 

By Abhigyan Singh, Krishna Tripathi, Yatharth Gupta

## Contributions

JavaFX, Inline CSS, Update & isValidDate Method, Exception handling – Abhigyan Singh

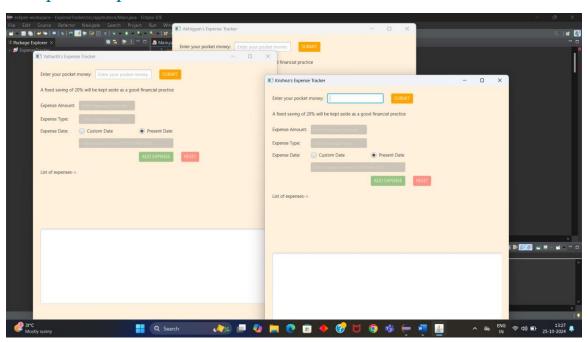

Defining Expense Manager Interface, color coding of balance – Yatharth Gupta

Using Threads by defining user class, process Method – Krishna Tripathi

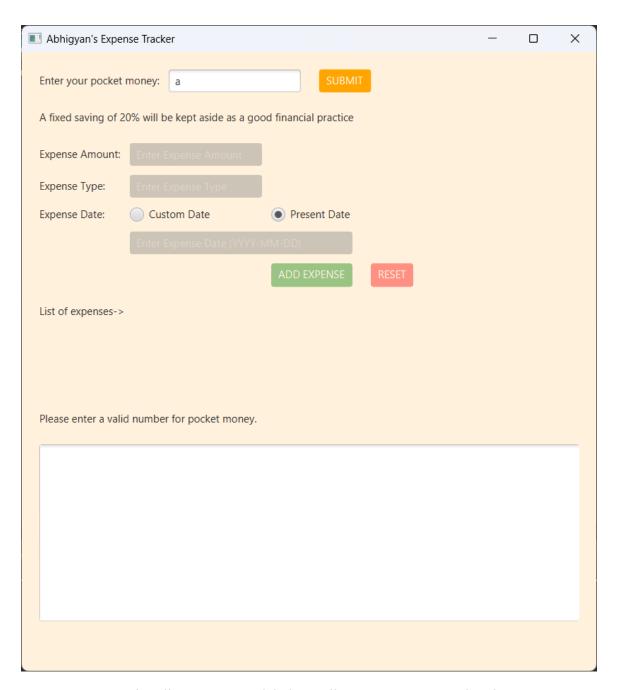

## **FEATURES USED**

- -JavaFX
- -Event Handling
- -Inline CSS
- -Interface
- -Multi-Threading

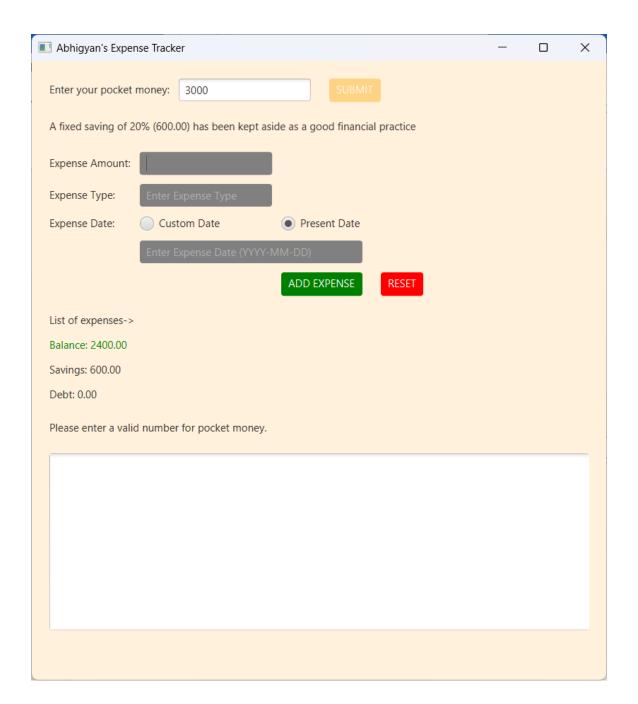

## Sample Outputs:-

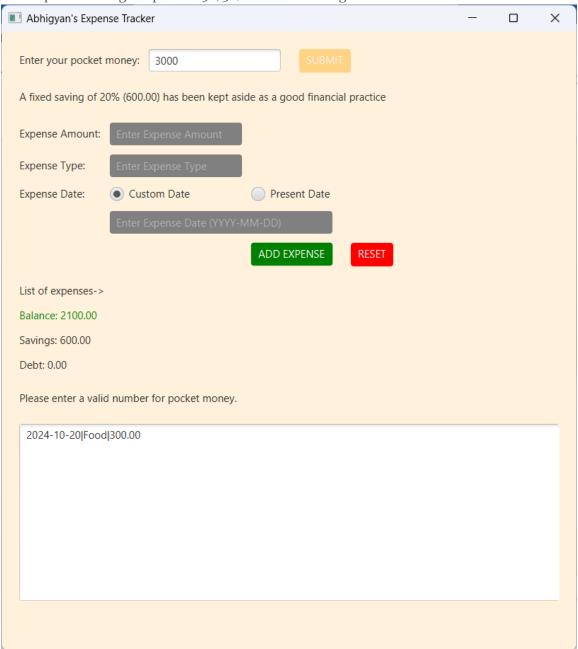

Multi-Threading concept used to make the program work for all 3 users at once.

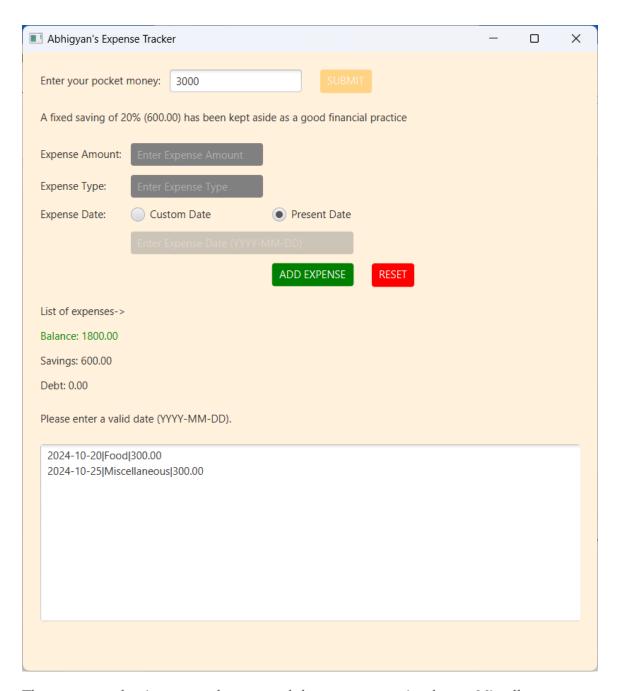

Due to Exception handling a warning label initially set as empty is updated to print an error.

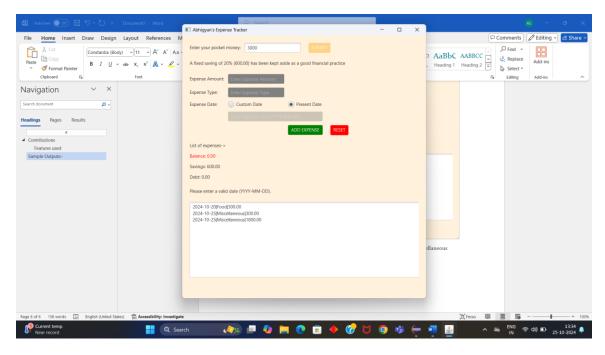

A sample input of 3000 as pocket money is taken, the balance is updated to 2400 and 20% of it is put as savings as per the 50/30/20 rule of saving.

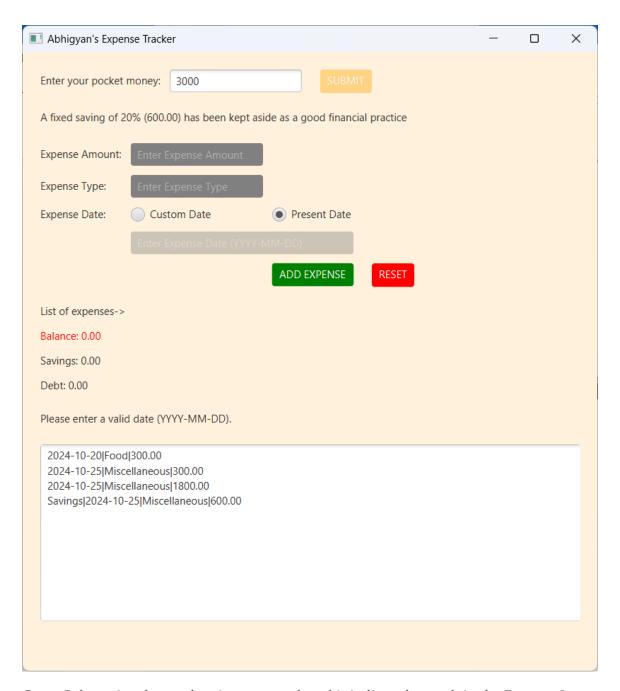

Custom Date has been entered along with expense and type. The expenses are printed along with type at the bottom

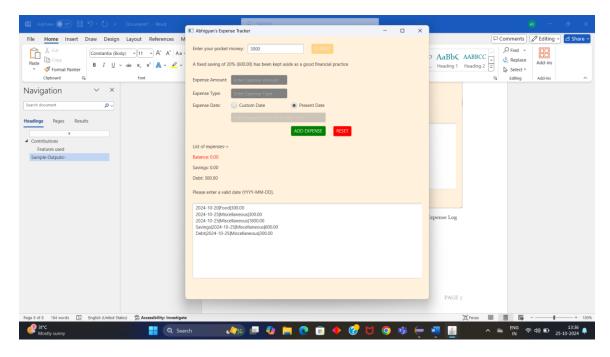

The program takes in present date too and the expense type is taken as Miscellaneous when we don't enter it

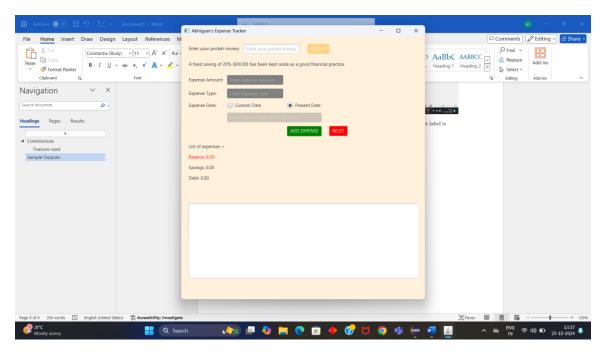

The Color coding concepts are used to indicate balance.

Once, Balance is exhausted savings are used, and is indicated as such in the Expense Log list.

Any amount after exhausting the savings too is Indicated as debt and the debt label is updated to show such

Pressing the reset button clears all logs and entries.
